

Holden Municipal Light Department

## **Street Light Conversion Program – Update 1**

**March 2017**

- *The Light Department is the recipient of a grant from the State Department of Energy Resources (DOER) to facilitate the conversion of our street lights to LED.*

- *Various LED fixtures are being or have been installed on a section of Holden Street as part of our pilot program to see which lights will work best for us.*
- *There will be eight different fixtures from 4 different suppliers, each with a letter designator upon the pole it's located (A – H).*
- *Two models from each supplier, 4000K and 3000K, are being tested. These numbers refer to the measurement of CCT – Correlated Color Temperature. The CCT is displayed in the “cool” or “warmth” of the light. The “cooler” models (4000k) have received a good deal of attention lately, especially from the American Medical Association.*
- *If you have preferences or thoughts on the various lights, please send us an email at [HMLD-streetlights@holdenma.gov](mailto:HMLD-streetlights@holdenma.gov) and include the letter designation(s) with your comments so we can track your preferences. You can also leave comments at our office at One Holden Street.*

**Over 100 Years of Public Power, Public Service**
